

HH-185

HANDHELD MICROPHONE BOOM

The HH-185 microphone boom allows the standard M-216 microphone transmitter to be used as a handheld wireless microphone. It may be passed around in a group setting or held in the hand and pointed at the desired sound source. The gain control on the M-216 transmitter allows the user to adjust the sensitivity of the microphone. The HH-185 boom incorporates a unique integral antenna design so that no external antenna is required while still maintaining the maximum transmission range.

- **Allows user to “point” to the sound source.**
- **May be used as a pass around handheld microphone for group situations.**
- **Uni-directional microphone reduces background room noise.**

Simple
“push and turn”
installation

NOTE:
Do not
over-tighten
